

Energy Management Snapshot

Are we properly metering energy usage so we know the true cost? Or do we employ general cost allocations hidden within the traditional budget structure?

Have we benchmarked our energy usage against national averages, sister facilities or our competition? How do we compare?

What training do our employees receive on the topic of energy efficiency and identifying energy wasters?

How do we reward or recognize employees for finding ways to reduce energy?

Have we explored the federal, state, local and utility incentives or low interest loans for energy efficiency projects?

Does our energy management program have goals that can be measured?

Do we have a budget allocated for energy management?

Who is the person dedicated to the energy management program?

How do we nurture an energy-efficiency culture?

Notes:

If your plant's energy management program isn't meeting your expectations, please contact PowerSource for a free initial evaluation.

Discover the PowerSource difference

- Specialists in electrical power for industry
- Objective source of expert guidance - we do not sell equipment
- Owner-supervised accessibility and accountability
